

#Desplastíciate

Nosotros ya lo hicimos

Consuming hot foods
contained in

styrofoam

is related to damage
to the liver function,
blood and the central nervous system
such as:

**Neurosis,
insomnia,
depression,
headache.**

**The styrofoam
is not
biodegradable.**

Over time it is only divided
into smaller pieces that

**never
disappear**

The main compound of
styrofoam
is derived from petroleum
for which
it is considered a
carcinogenic
product for humans*

* Agency of Toxic Substances and Disease Registry of
the United States of America (ATSDR)

Burning styrofoam
contributes to
**global
warming**
and the gases emitted are
highly toxic
to human health*

*Bureau of Standards of the National Institute of Standards and Technologies of
the United States of America

The prolonged exposure
to the steam that is expelled
during the manufacture of
styrofoam
is linked to hormonal
changes that
**affect the female
reproductive system.**
